

Front-Side Workflow

1. Login Window

This is the window what comes at first after starting the programm

Touch screen keyboard for password input.

This window comes if the timer/screen saver automatically log out the user. (system parameter this time for auto logout)

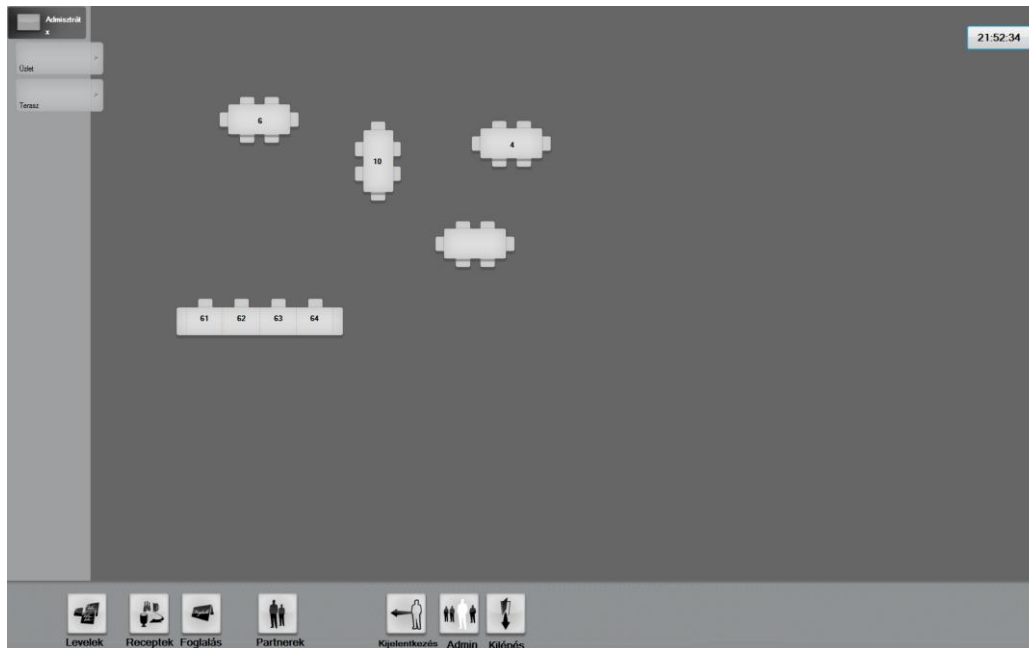

2. Main window

This is what is coming after the login

Buttons:

- User button (left up corner): by clicking comes the user change(1) login window
- Left buttons are the places (Rooms) in the Restaurant
- Center Screen: Tables, chairs. They are painted by me and can be stored in a Folder
 - o Table colors:
 - red: reserved for the near future (can be set the delay how many times before should be red)
 - yellow: existing order at the table
 - grey: free

- Buttons Menu bar

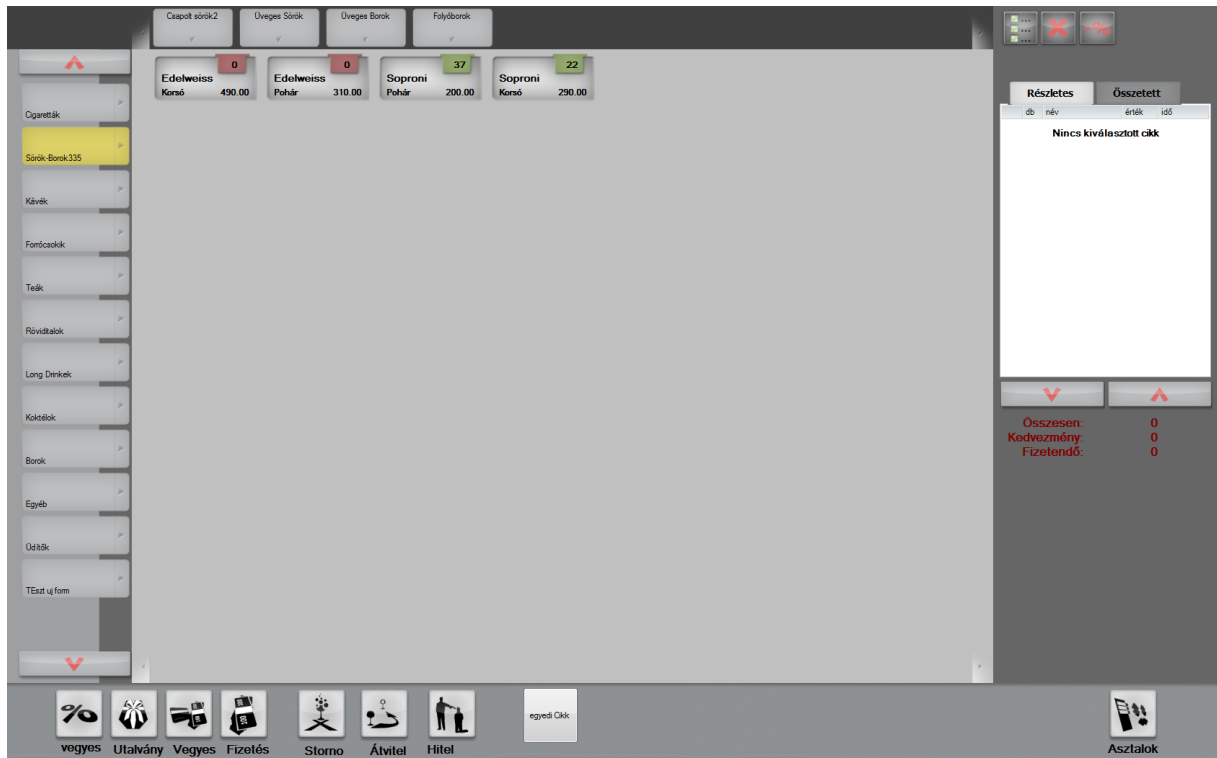

- 1. Internal messages window: There can be left „post its” for the other workers or remarks into the restaurant.
- 2. "How to Prepare". a view for multiple products
- 3. Reservations: You click first this button then by clicking a table opens the reservation maker window(4)
- 4. Partners: Opens the Partner windows, where can be edited and inserted a customer
- 5. Logout
- 6. Administrator
- 7. Exit

By clicking a table opens the Order window (3)

If it is a red (reserved table) should ask that I want to release the reservation or not.

3. Make order

(by clicking a table)

left side buttons: product groups

top buttons: subgroups if exists to the article group

center: articles (standard and multi part articles)

Buttons:

- right top:
 - o select all
 - o delete row
 - o discount for all or for the selected rows
- ordered grid:
 - o 1. detailed
 - o 2. summarized
- Article button – Adds to the grid (right) the touched article with Quantity

Article Quantities can be set in the article master data Example: Vodka 0,3 ccl, 0,2 cc in this situation the Vodka will be shown 2 times in the order maker part, but ONE Article in the background.

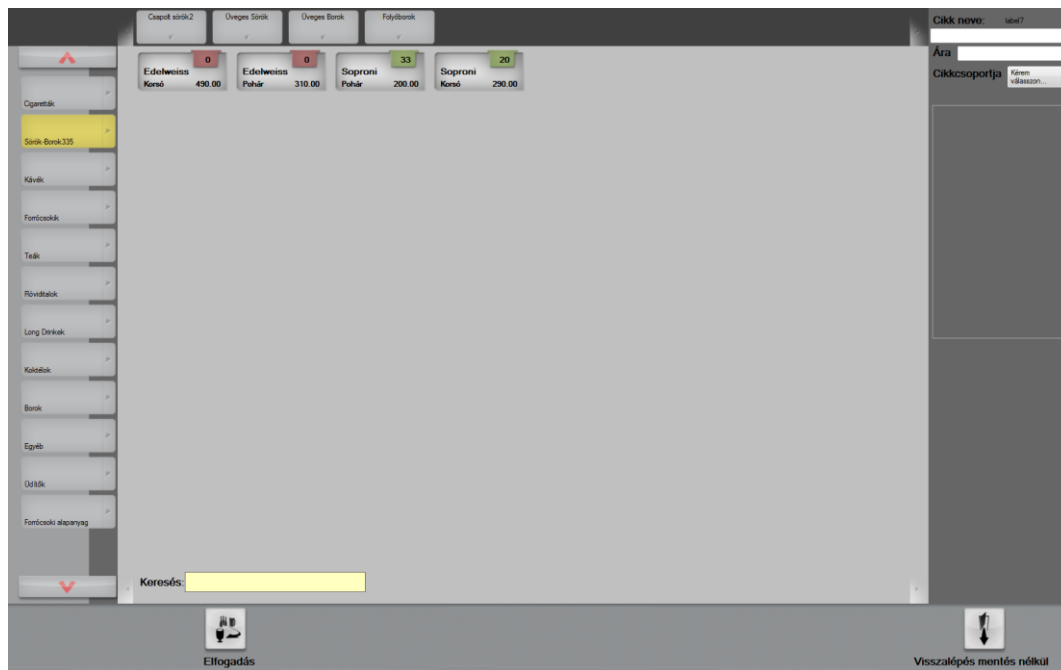

- o right corner:
 - red: no Quantity in the default stock
 - green: enough on the main stock
- button under:
 - o payment methods: 1-4 : Opens the same Invoice report with a different parameter
 - o 5 Storno. Will everything book out to a trash stock
 - o 6. Move to another table

- 7. Write up to a customer if there are free credit limit for them. (Payment later)
- 8. create own Article:

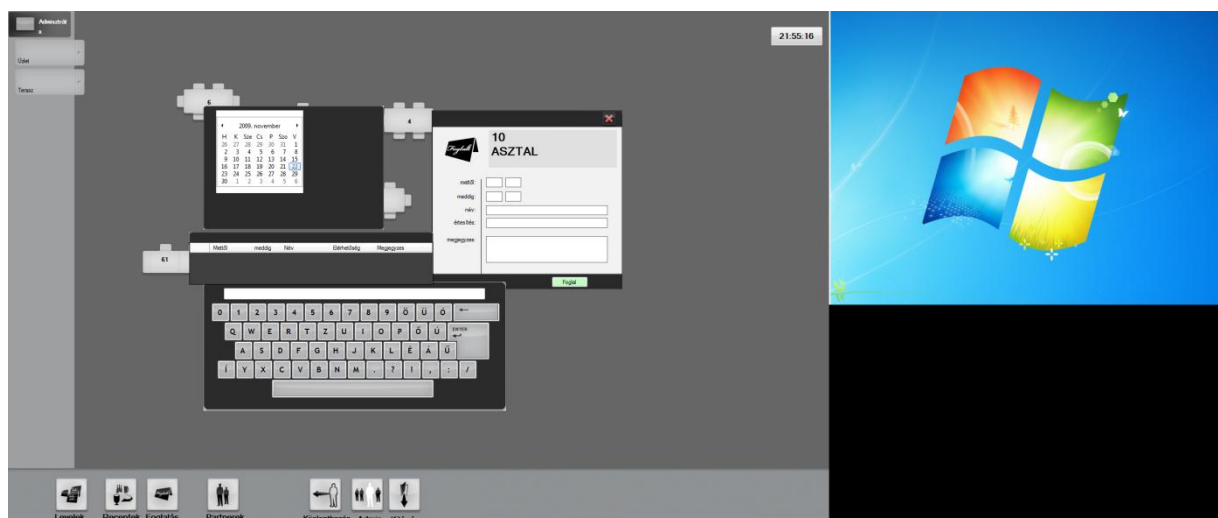

similar to the order window, but the articles will be added to a temporary article wich has a price. The part articles will be booked out from the stock if the article is ready.

Search functionality

Ready by touching the ready button.

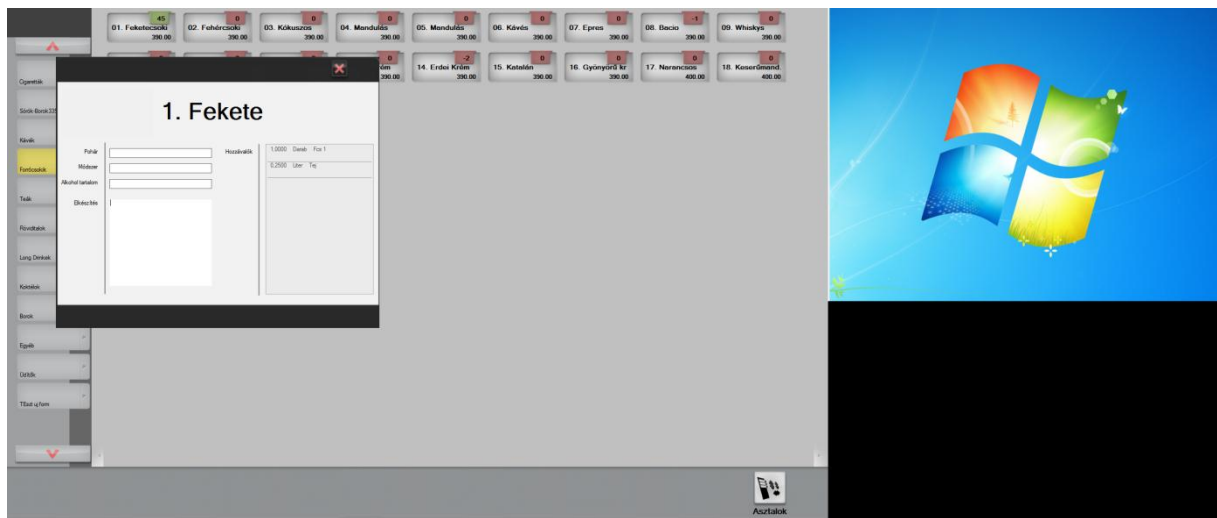

4. Reservations:

5. Mixed Products(Receptek Button in the main menu)

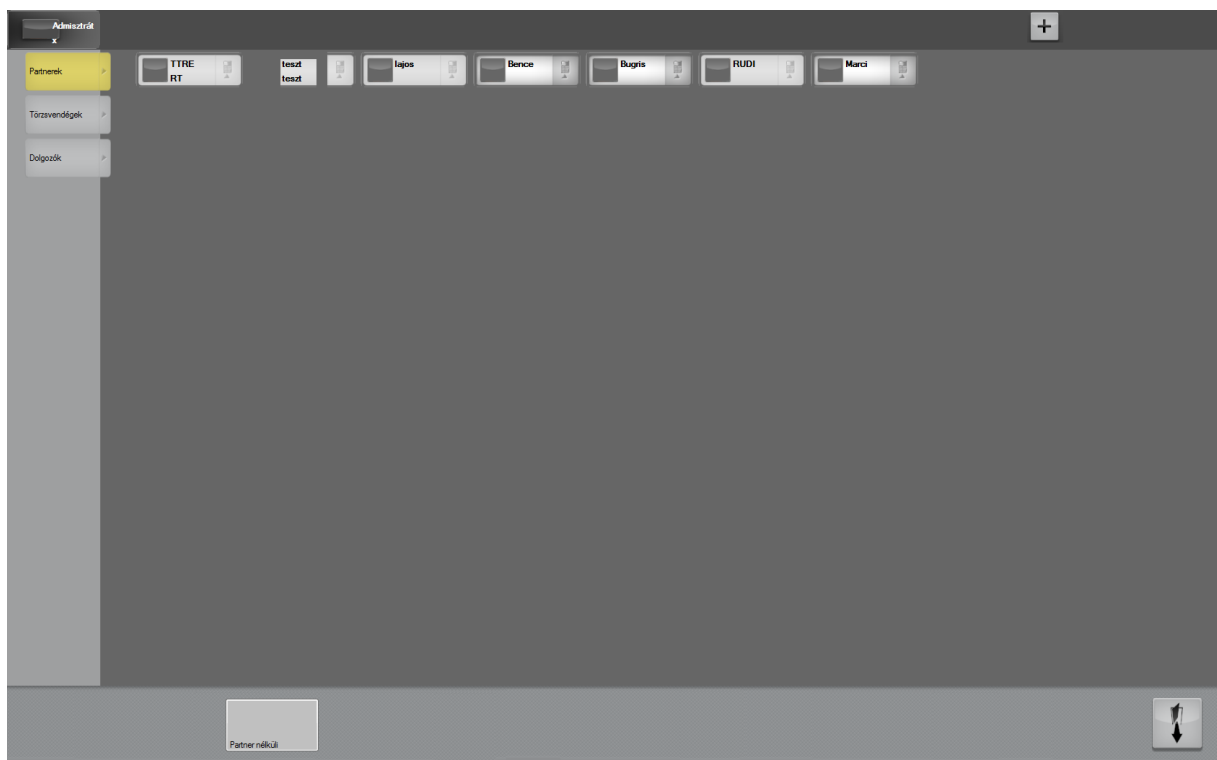

A description from the article master data for information to the mixer.

6. Customers

Right are the customer groups.

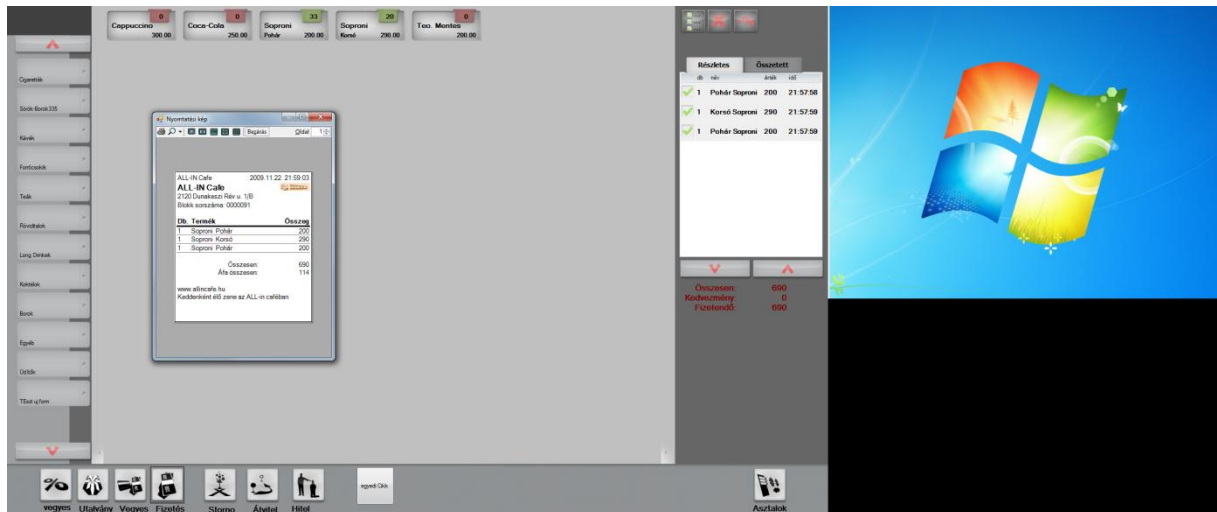

with the „+“ button can a new customer added to the system.

The buttons in the center are the customers to the selected customer groups.

Each partner button has two parts the left side: can edit → following window, right side you can create an order for the customer (→ window 3)

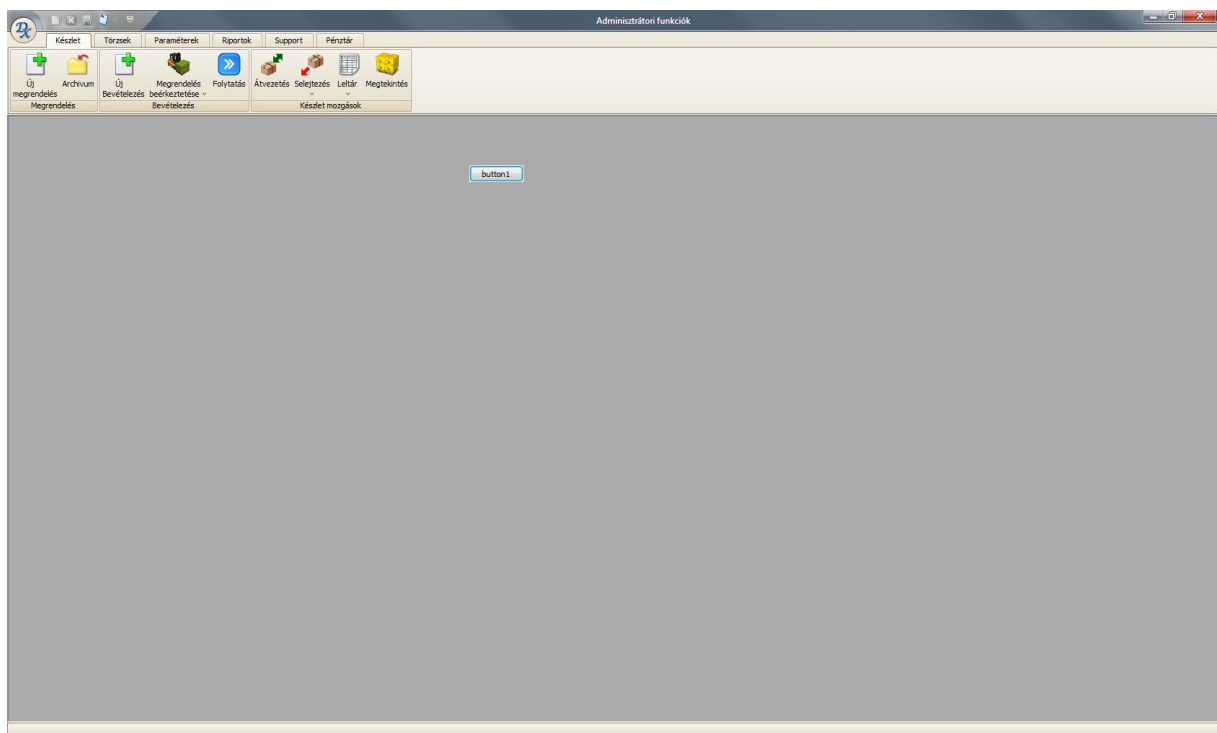

print out an invoice report

Report can be differ from the window above
